Strongly disagree

Openness about the algorithms used in data processing is crucial for ensuring they do not perpetuate existing societal biases.

4.8

Strongly disagree

The inherent biases in historical data collection are too pervasive to allow for truly objective modern data applications.

Bias is data too! Biases aren't bugs, they're features. Data reflects our choices—change the choices, change the data.

Strongly disagree

Researchers must consider not only how they use data ethically but also how their data might be used or misused by others after publication.

4.5

Strongly disagree

Digital Humanists have a responsibility to use their skills for social activism, challenging injustices and promoting equity.

All digital humanistic work should be openly accessible, to democratize knowledge beyond the traditional academic gates.

4.4

Strongly disagree

Digital methodologies have the potential to fundamentally reshape how we conduct humanities research.

4.1

Strongly disagree

Digital methodologies should fundamentally reshape how we conduct humanities research.

2.6

Strongly disagree

Humanities scholars should embrace 'maker' cultures that incorporate coding, design, and multimedia artistry into their research methodologies.

3.8

Strongly disagree

DH people are "so nice" because they are not really concerned with theory (more with methodology). Because of that: fewer "fights" in the field.

digital computational humanities?

just call it 'humanities' already!

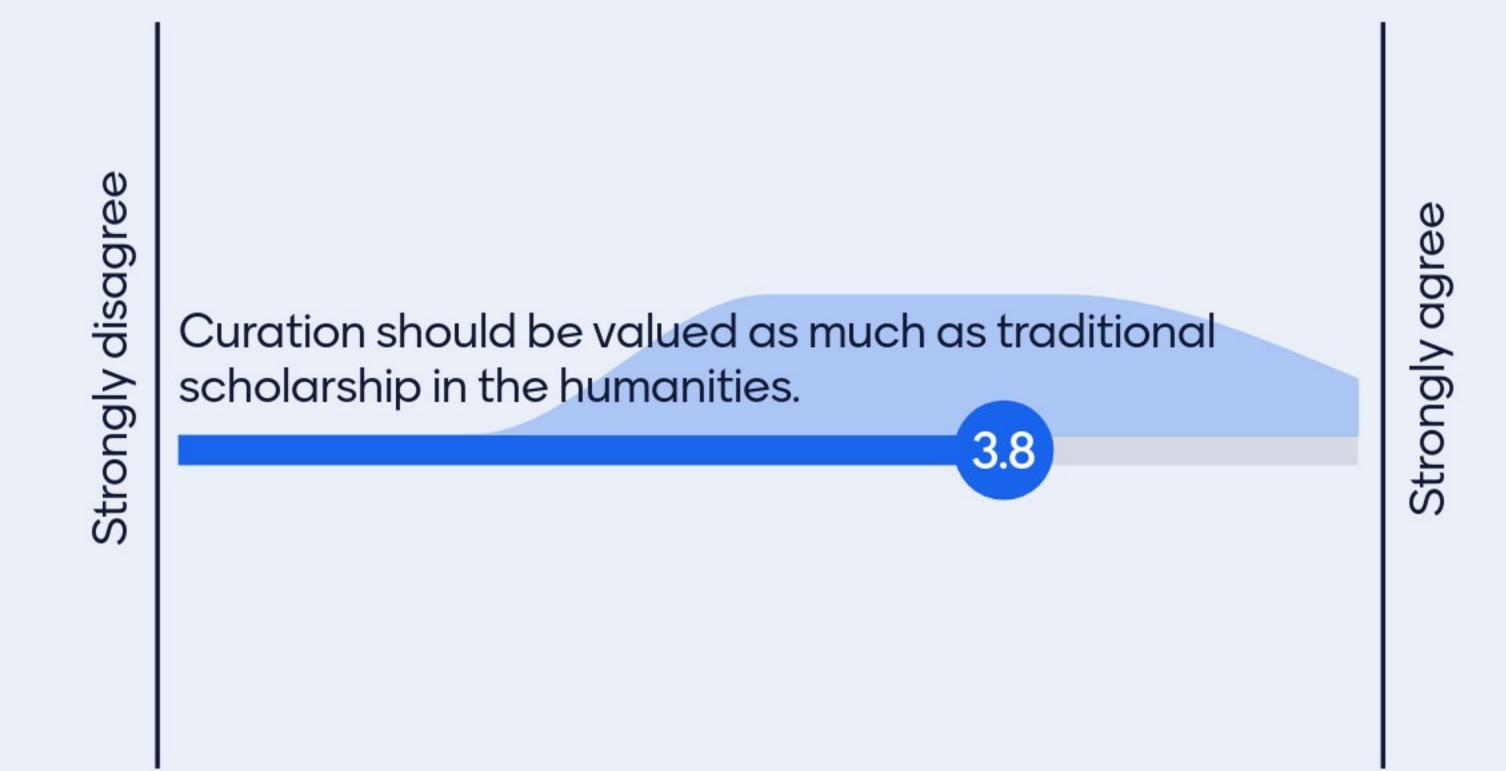

0%

nah, this field should be called something else entirely

Strongly disagree

Curation should be recognized as a fundamental scholarly practice within humanities, equivalent to traditional narrative scholarship.

3.3

Strongly disagree

The future of humanities lies in breaking down the walls between disciplines rather than in further specialization.

2.9

Strongly disagree

Text is tyranny! Prioritizing text marginalizes other narratives. Embrace multimedia as the new canon of critical scholarship.
